

MyLifeMyMoney Superannuation Fund – Carbon Footprint Summary 2019

A summary of the Fund's carbon intensity, carbon risk rating, fossil fuel exposures, and stranded asset exposures within its equity holdings in Australian and global shares (the Fund's portfolio) as at 30 June 2019 is shown below. These are among the key measures of carbon footprint. The carbon footprint data and analysis are based on research conducted by Sustainalytics.

Carbon Intensity

Carbon Intensity is a relative metric used to compare company emissions across industries. Sustainalytics divides the absolute emissions by total revenue, meaning the figure is expressed in tonnes of carbon dioxide equivalent per million USD of total revenue.

Measurement Unit	Fund's Portfolio	Benchmark	Relative Efficiency
Tonnes CO ₂ e / \$mil (USD)	235	242	3%

Carbon Risk Rating

The Carbon Risk Rating metric applies the concept of risk decomposition to derive the level of unmanaged risk for a company. The Carbon Risk Rating quantifies a company's exposure and management of material carbon issues in its own operations as well as its products and services. Companies with lower scores have lower Carbon risk.

Measurement Unit	Fund's Portfolio	Benchmark	Relative Efficiency
Score (out of 100)	10.4 (Low Risk)	10.4 (Low Risk)	0%

Fossil Fuel Exposures

Fossil Fuel Exposures metric measures the percentage of revenue that companies derive from thermal coal extraction, coal-based power generation, oil & gas production, oil & gas-based power generation, and oil & gas-related products and services.

Measurement Unit	Fund's Portfolio	Benchmark	Relative Efficiency
Weighted percentage	12.5%	13.6%	8%

Stranded Asset Exposures

Stranded Assets are oil and gas assets that are unlikely to be commercially viable in a low carbon economy. They are high cost projects such as arctic exploration and oil sands development. The Stranded Assets Exposure Score assesses the financial risk associated with fossil fuel production and reserves, and any specific involvement in high-cost fossil fuel projects.

Measurement Unit	Fund's Portfolio	Benchmark	Relative Efficiency
Weighted percentage	3.0%	3.1%	4%
